

ENVIRONMENTAL POLICY

Macaronesian Hotels & Resorts values the limitation of the natural resources available and the environmental impact generated by the activity of its establishments in the environment, both direct and in general. This determines the need to adopt a proactive attitude with regards to the protection of environment and to encourage the implementation of an Environmental Management System.

This will be developed through 6 general principles of performance which make up the Environmental Policy of Marylanza Suites & Spa:

1. **IDENTIFY** the processes, services and products, constantly measuring their influence on the environment.
2. **STUDY** all possible measures to manage and reduce the use of non-renewable resources, polluting emissions or waste production.
3. **ESTABLISH** the environmental Policy, Goals and Aims and define the actions to be taken in order to improve day after day the environmental behaviour of our activity.
4. **COMPLY** with the environmental legislation and rules applicable and with the rest of the commitments that our establishment may acquire in terms of environment.
5. **ENCOURAGE** the sensibilization of the staff and the environmental responsibility of our partners and clients.
6. **SPREAD** among society our values and the information which proves our commitment with the improvement of the protection of environment.
